AIRPORTS USED

CRITERIA:

1. Normally, an airport is counted every time I was in an airplane that took off from there or landed there.
2. An airport is counted only once if I used it to transfer from one plane to another. However, if I took the opportunity to visit a nearby city, then returned to the airport to take another flight on the same day, the airport is counted twice. Airports that this happened at were Amsterdam, Hong Kong and Vienna.

- An airport is counted only once if I landed there in a plane and took off from there in the same plane, whether or not I stretched my legs in the terminal or stayed in the plane. In either case, such a stay at the airport is designated with an asterisk (*).

COLUMNS

- Column 1 contains the ordinal number in my listing, from the airport used the greatest number of times to that used the least number of times. For airports used the same number of times, the secondary order is alphabetical.
- Column 2 contains the name of the airport.
- Column 3 contains the IATA code for the airport. Note that code BKK was used for Bangkok Don Muang Airport when I used it, but this code is now used for Suvarnabhumi Airport, opened in 2006.
- Column 4 contains the ISO 3166-1 alpha-3 code for the country the airport is in.
- Column 5 contains the year(s) in which I used the airport. Every use is listed separately.
